Maisomage for Matter & HomeKit
Version 4.0 Now Available

Download on the App Store

Paris, April 14, 2025

What's New:

Enhanced Visualization of Home Scenes: Presented as an intuitive and concise control panel. This feature is especially useful on iPad, Mac, and Apple Vision Pro, allowing access to numerous scenes with a single click.

Easily Rename All Home Scenes: Often, scene names may not feel entirely fitting over time. With our new contextual menu, simply request to rename a scene, and it’s done.

Animated Scene Launch Confirmation: A magical wand animation deploys a star that expands to fill the screen, then spreads to your home devices, controlling them as instructed. For instance, activating a scene to turn on the lights will cause the star to grow, fill the screen, and illuminate the room as an extension of the star. Maisomage is your magic wand, casting the perfect spell.

Accessibility Features: Maisomage is designed for accessibility. Activate VoiceOver without looking at the screen to hear a list of all home scenes, each with a description of the corresponding action, such as turning on lights or adjusting a thermostat.
Optimized for Large Text: Misplaced your glasses? Increase font size on your device to easily control your connected home via Maisomage. Using the Text Size tool from the iPhone or iPad Control Center, you can select a larger font size specifically for Maisomage without affecting the entire system.
Manage Multiple Homes: On iPad and Mac, open multiple windows simultaneously to manage different properties with ease. On Mac, you can also have multiple tabs within a single window.
Error Prevention with Long Press: Touchscreens can lead to accidental taps. To prevent unintended actions, like turning on heating in an unoccupied secondary home or the shutdown of the main lighting in your home, Maisomage on iPhone and iPad employs a long-press feature with animation to confirm actions visually, reducing the risk of errors while scrolling through home scenes.

Platform Availability:

Maisomage is available on iPhone, iPad, Mac, Apple Vision Pro, and Apple TV.

Apple Vision Pro Enhancements in Version 4.0:

Auto-Enlargement of Scene Buttons: This feature, introduced with visionOS 2, provides visual confirmation of the selected button before tapping to validate. Maisomage is among the first apps to incorporate this functionality.
Magic Wand Animation in Foreground: Another visionOS 2 innovation, enhancing user interaction within Maisomage.

These examples highlight how traditional applications can leverage the unique ergonomics of Apple Vision Pro when properly adapted.
