Press release

Apple Vision Pro is the first spatial computing experience that lets you enjoy a screen the size of your field of vision for your applications while enjoying the real world around you. This involves managing your environment, including turning on the lights when it's dark, adjusting the temperature in the room where you are comfortably seated, or closing the curtains when the sun is in your face. Fortunately you already have connected devices, your lights, thermostats and curtains, but you now have to use them from Apple Vision Pro and you need an application for that.

This is why Maisomage for Matter & HomeKit is now available on Apple Vision Pro. With a simple click you activate the scene which defines the ambience which corresponds to your needs by setting all the necessary devices as required: turn on the light, define its brightness, its color, close the curtain, adjust the thermostat, etc. Haven't set a scene in your connected home yet? No problem Maisomage for Matter & HomeKit lets you create all the scenes you need right with your Apple Vision Pro with just a few glances and taps.

By looking at the sensors tab, with a tap of your finger you see all the sensors in your connected home: air quality, temperature, humidity, movements detected in your home, the battery level of your home automation devices , the opening level of your curtains and shutters...

Maisomage for Matter & HomeKit also allows you to program automations. This first version on Apple Vision Pro allows you, with a subscription, to save money by putting your devices in energy saving mode when you leave your home and putting them back in comfort mode when you return without intervention on your part.

Maisomage for Matter & HomeKit is therefore a control panel for your Smart Home to which you give the size you want and which you position as you wish in your visual space. Thanks to Apple Vision Pro, you just have to look at the name of the scene on your control panel to activate it with a tap of your finger, even from afar. Imagine just looking at your switch to turn on the light, you become a mage? No, it's simply the magic that Maisomage for Matter & HomeKit provides you.

Above : Maisomage for Matter & HomeKit with its default size when launched. The scene tab allows to set a scene just by looking at it with an hand tap

Above : The sensor tab allows to view all the sensors

Maisomage defines the automations. They are managed by your HomePod, HomePod mini, or AppleTV (4K or HD) and the default Location Services enabled for Apple HomeKit in your iPhone's System Services.

Apple, HomePod, HomeKit, iPhone, iPad, Mac, AppleTV and Apple Vision Pro are registered trademarks of Apple Inc.

Maisonmage for Matter & HomeKit allows you to manage your real-world Smart Home from the spatial computing of Apple Vision Pro : turn on the light, define its brightness, its color, close the curtain, adjust the thermostat, etc.
